SOURCE SERVER

1. (Currently Amended) A computer-readable storage medium having computer-executable instructions stored thereon that, when executed by a processor, implement a method for associating original source code with binary code for debugging the binary code, the method comprising:

storing a source code file on a server, the source code file including source code and being associated with a version;

compiling the source code file into executable code a binary file;

while compiling the source code file, extracting obtaining information that identifies the server and the version associated with the source code file;

storing the extracted information in a debug area file associated with the executable code binary file;

receiving an instruction for a debugger to debug the binary file;

using the extracted information in the debug file, locating the source code file and associate it with the binary file; and

debugging the binary file with full source code support by correlating lines of the source code file with binary instructions in the binary file, the source code file including only the source code originally used to compile the binary file.
